## **A sensational entrance for Fozmula's new sensors and displays in Dubai!**

Fozmula Ltd is delighted to be returning to the prestigious Middle East Electricity exhibition and conference to be held at the Dubai International Exhibition Centre between 7 and 9 February, 2012. Having exhibited for the first time last year, and noted the high quality of the venue and its visitors, Fozmula decided to partner again with the British Pavilion organiser, BEAMA, and is located in **Hall 6 at Stand 6C50**.

MEE is also an excellent forum for Fozmula to introduce a new ground breaking fuel level sensor, the **T/LL350**, which is not only the highly accurate device you expect it to be, but some variants will detect if incorrect fuel is in the tank, e.g. petrol vs. diesel, and can alert the user. Furthermore, because it continuously recalibrates itself and detects the type of liquid, it continues to work with excellent accuracy in fuels that have differing additives in them. So, if one day it is used in conventional diesel and the next fill is with biodiesel it just carries on working as accurately as ever. It is also capable of detecting sudden fuel loss caused either by a leak in the tank or the theft of fuel. Now that is what we call clever and unique in sensor development!

Also being shown are the new **L130** remote digital indicator, the **T/LL200** hydrostatic level sensor and the clever multi-function **L110** tank level controller.

You should arrange a visit to meet our stand team of Paul Holtby - Sales Director, Lisa Bennett - Export Accounts Manager and Steve Lowe – Product Applications Engineer who will be delighted to demonstrate these revolutionary new sensors and displays and we believe you will not be disappointed.

Also on display will be Fozmula's highly regarded range of sensors, switches, gauges and monitoring equipment as used extensively by generator set manufacturers the world over, Fozmula's product range covers applications including fuel and coolant level, engine temperature and pressure, mechanical and electronic gauging systems for fuel level and remote telemetry sensors which can report sudden fuel loss.

For more than 30 years, Fozmula has continued to pioneer the design and manufacture of a wide range of electromechanical, mechanical and electronics sensors, gauges and switches for equipment requiring liquid level, temperature and pressure measurement worldwide.

## **END**
