Important product announcement

Fozmula's new engine coolant check system just the ticket!

Leamington Spa based Fozmula launches the L70 series of engine coolant check systems, perfect for coach and bus builders and operators.

In today's economic climate, the challenge is to keep vehicle operating costs down and efficiency up, which is particularly important in the passenger transport sector.

For example, if a vehicle's engine coolant should fall below a minimum level and cause serious overheating then the cost implications for engine repair or replacement, engineer's time, towing costs and consequential loss of revenue whilst the vehicle is out of service, could be immeasurable.

Fozmula were briefed to design and develop a system which allows the driver easily to check the level of engine coolant before it commences service for the day.

The check system is capable of being fitted either as a standard or retrofit part and comprises just a capacitance switch for sensing the coolant and a simple to use remote control panel. The panel may be mounted in any convenient position and merely requires a feed from the vehicle's battery.

Fozmula's new L70 check system is a demonstration of how simple, pre-emptive maintenance can prove to be extremely cost-effective in such an efficiency dependent industry.

Fozmula Limited designs, manufactures and markets a wide range of electromechanical, mechanical and electronics sensors, gauges and switches for equipment requiring liquid level, temperature and pressure measurement worldwide. Our engineers welcome the opportunity to offer solutions to enquiries that are related to engine and fuel and transmission system applications.
